

What Matters

Important random-variable properties?

Range

Min & max values of X | Lowest & highest temperature / salary

$$x_{min} = min \{ x \in \Omega \mid p(x) > 0 \}$$

$$x_{max} = max \{ x \in \Omega \mid p(x) > 0 \}$$

Average

Average temperature / salary

Range average

$$\frac{x_{\min} + x_{\max}}{2}$$
?

Element average

or over x s.t. p(x)>0

Sample Mean

$$\Omega = \{0, ..., 100\}$$

$$p(0) = .8$$

$$p(90)=.1$$

$$p(100)=.1$$

$$p(90)=.1$$
 $p(100)=.1$ all other $p(x)=0$

Range average

$$(x_{min}+x_{max})/2$$

$$(0+100)/2 = 50$$

Element average

positive probabilities

$$(0+90+100)/3 = 63.3$$

Ten samples

Typical

0, 0, 0, 0, 90, 0, 0, 0, 100, 0

Sample mean

(8.0+1.90+1.100)/10 = 190/10 = 19

More representative of what we will observe

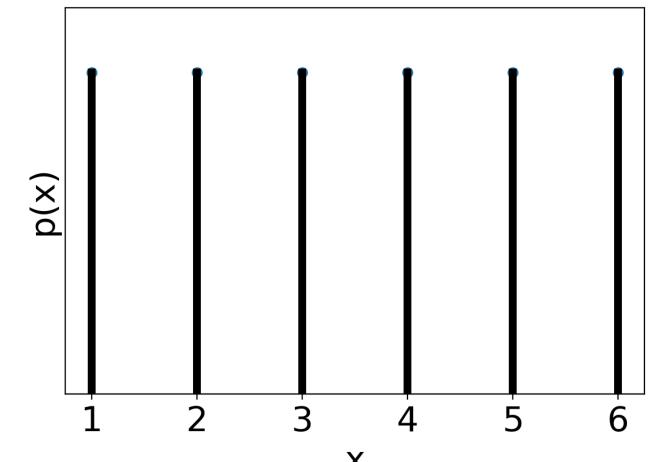

Fair Die

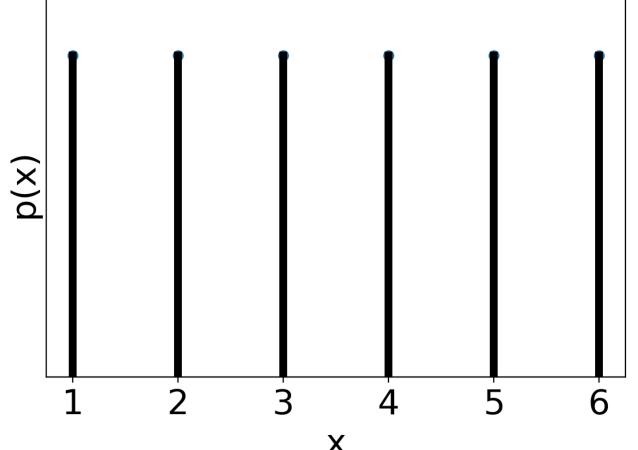

Roll a fair die n → ∞ times

Average of the observed values = ?

Each value ~n/6 times

Average

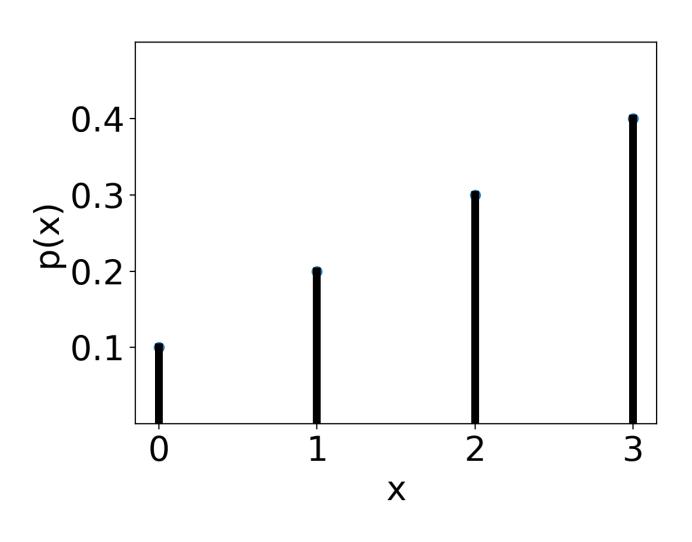

$$\frac{\frac{n}{6} \cdot 1 + \frac{n}{6} \cdot 2 + \dots + \frac{n}{6} \cdot 6}{n} = \frac{1 + \dots + 6}{6} = \frac{1}{6} \frac{(1+6) \cdot 6}{2} = 3.5$$

$$1,...,6$$
 \rightarrow Average = 3.5

Side	Prob	Appear
1	.1	.1n
2	.2	.2n
3	.3	.3n
4	.4	.4n

4-Sided Die

$$= \frac{.1n \cdot 1 + .2n \cdot 2 + .3n \cdot 3 + .4n \cdot 4}{n}$$

$$= 0.1 \cdot 1 + 0.2 \cdot 2 + 0.3 \cdot 3 + 0.4 \cdot 4 = 3$$

Arithmetic average

$$(1+2+3+4)/4 = 2.5$$

Probabilities skew to the right

Expectation

In n → ∞ samples

x will appear

p(x)·n times

Mean

E(X) also denoted

EX

Not random constant property of the distribution

Fair Die

$$E(X) = \sum_{i=1}^{6} P(i) \cdot i$$

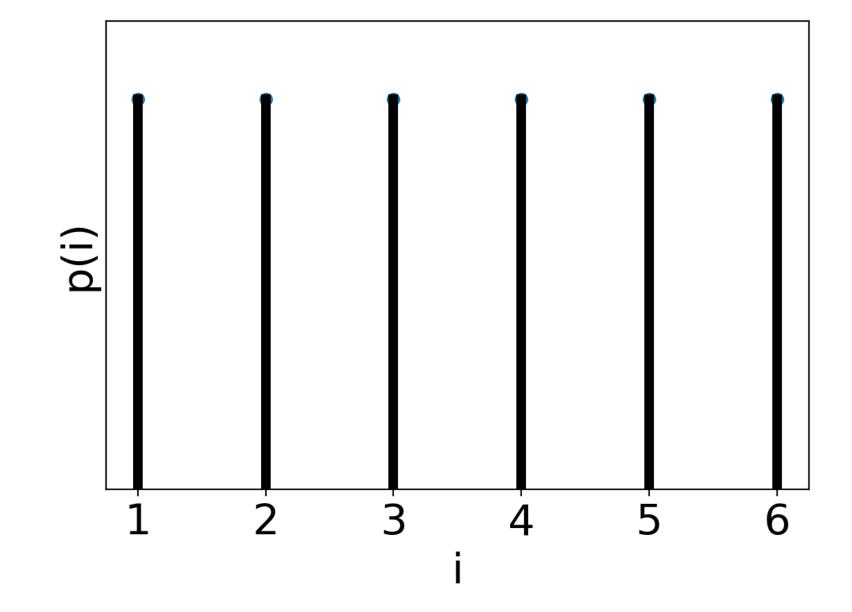

$$= \sum_{i=1}^{6} \frac{1}{6} \cdot i$$

$$= \frac{1+2+\ldots+6}{6}$$

$$= \frac{1(1+6)\cdot 6}$$

 $=\frac{1}{2}=3.5$

$$\frac{1}{6}$$
 $\frac{1}{6}$
 $\frac{6}{2}$

4 Sided-Die

$$E(X) = \sum_{i=1}^{4} p_i \cdot i$$

$$= 0.1 \cdot 1 + 0.2 \cdot 2 + 0.3 \cdot 3 + 0.4 \cdot 4$$

$$=3$$

3 Coins

Toss a coin 3 times

X - # heads

$$E(X) = ?$$

X	outcomes	p(x)
0	ttt	1/8
1	tth,tht,htt	3/8
2	thh, hth, hht	3/8
3	hhh	1/8

$$\sum P(x) \cdot x = \frac{1}{8} \cdot 0 + \frac{3}{8} \cdot 1 + \frac{3}{8} \cdot 2 + \frac{1}{8} \cdot 3 = 1.5$$

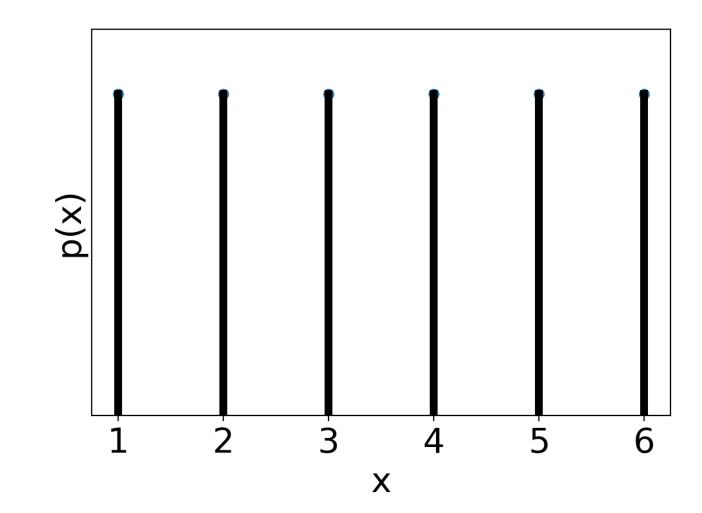

heads ranges from 0 to 3, on average 1.5

Uniform Variables

X uniform over Ω

$$p(x) = \frac{1}{|\Omega|}$$

$$E(X) = \sum_{x \in \Omega} p(x) \cdot x = \sum_{x \in \Omega} \frac{1}{|\Omega|} \cdot x = \frac{1}{|\Omega|} \sum_{x \in \Omega} x$$

E(X) is the arithmetic average of elements in Ω

$$E(X) = \frac{1+2+...+6}{6} = 3.5$$

Symmetry

A distribution p is symmetric around a if for all x > 0, p(a+x) = p(a-x)

If p is symmetric around a, then E(X) = a

X	outcomes	P(x)
0	ttt	1/8
1	tth,tht,htt	3/8
2	thh, hth, hht	3/8
3	hhh	1/8

$$\begin{array}{c}
0.5 \\
0.4 \\
0.3 \\
0.2 \\
0.1 \\
0.0 \\
0
\end{array}$$

Symmetric around 1.5

$$E(X) = 1.5$$

Properties

E(X) Despite notation

Not random

Number

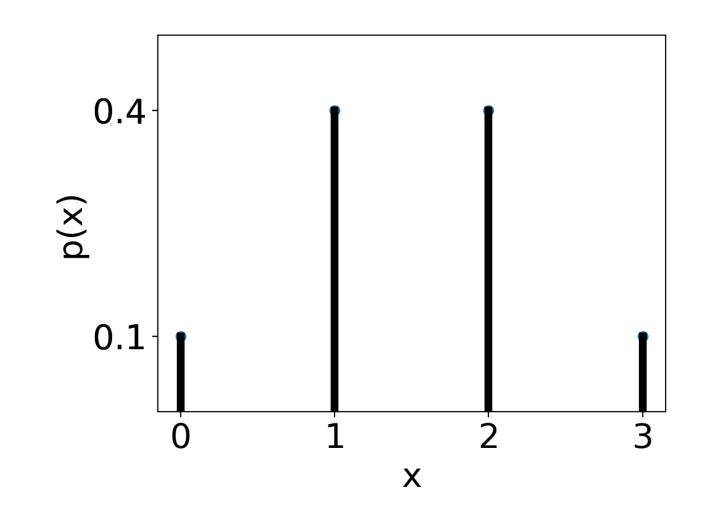

Property of distribution

$$E(X) = 1.5$$

$$X_{min} \leq E(X) \leq X_{max}$$

$$= iff X = c$$

$$0 \le E(X) \le 3$$

X is a constant, namely $X=c \rightarrow E(X)=c$

$$E(E(X)) = E(X)$$

Is Expectation Expected?

 $\mu = EX - expectation of X$

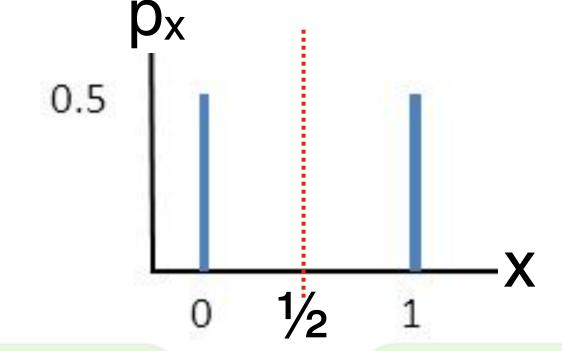

Do we expect to see it?

Is p_μ high?

Not necessarily

We may never see it!

$$p_0 = p_1 = 0.5$$

 $EX = 0 \cdot p_0 + 1 \cdot p_1 = 0 \cdot \frac{1}{2} + 1 \cdot \frac{1}{2} = \frac{1}{2}$

Symmetric around 1/2

½ will never happen!

Many samples → average = ½

EX - average of large sample

Not necessarily likely

May not be observed at all

Infinite Expectation

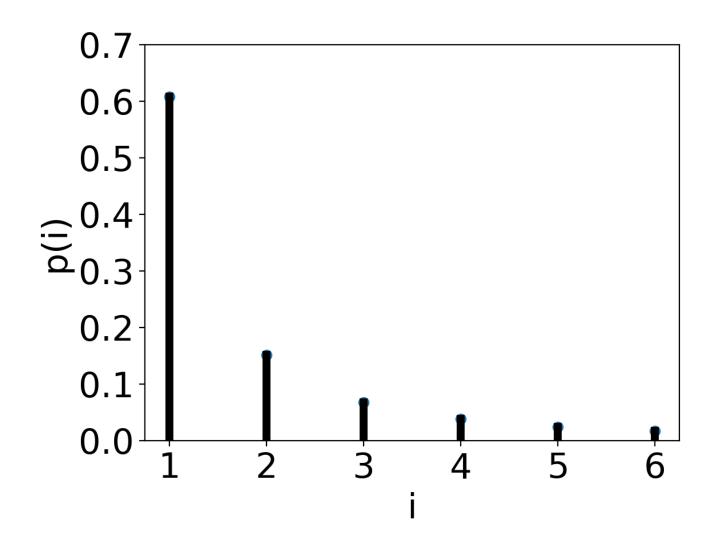

$$\sum_{i=1}^{\infty} \frac{1}{i^2} = \frac{\pi^2}{6}$$

Basel problem Euler → famous

$$\frac{6}{\pi^2} \sum_{i=1}^{\infty} \frac{1}{i^2} = 1$$

$$p_i = \frac{6}{\pi^2} \cdot \frac{1}{i^2}$$

 $p_i = \frac{6}{\pi^2} \cdot \frac{1}{i^2}$ probability distribution over $\mathbb P$

$$E(X) = \sum_{i=1}^{\infty} i \cdot p_i = \frac{6}{\pi^2} \sum_{i=1}^{\infty} \frac{1}{i} = \infty$$

Many samples

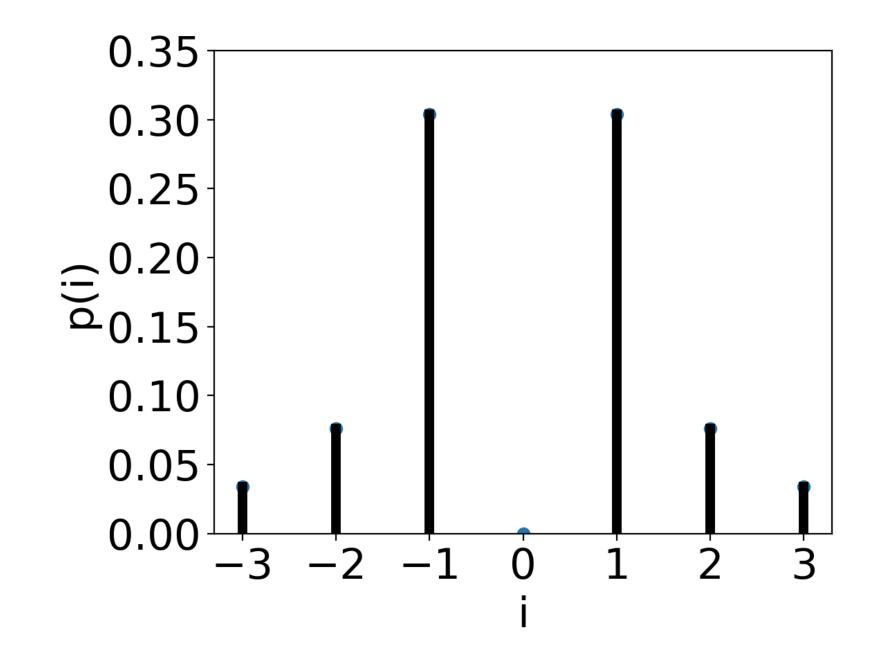

Average will go to ∞

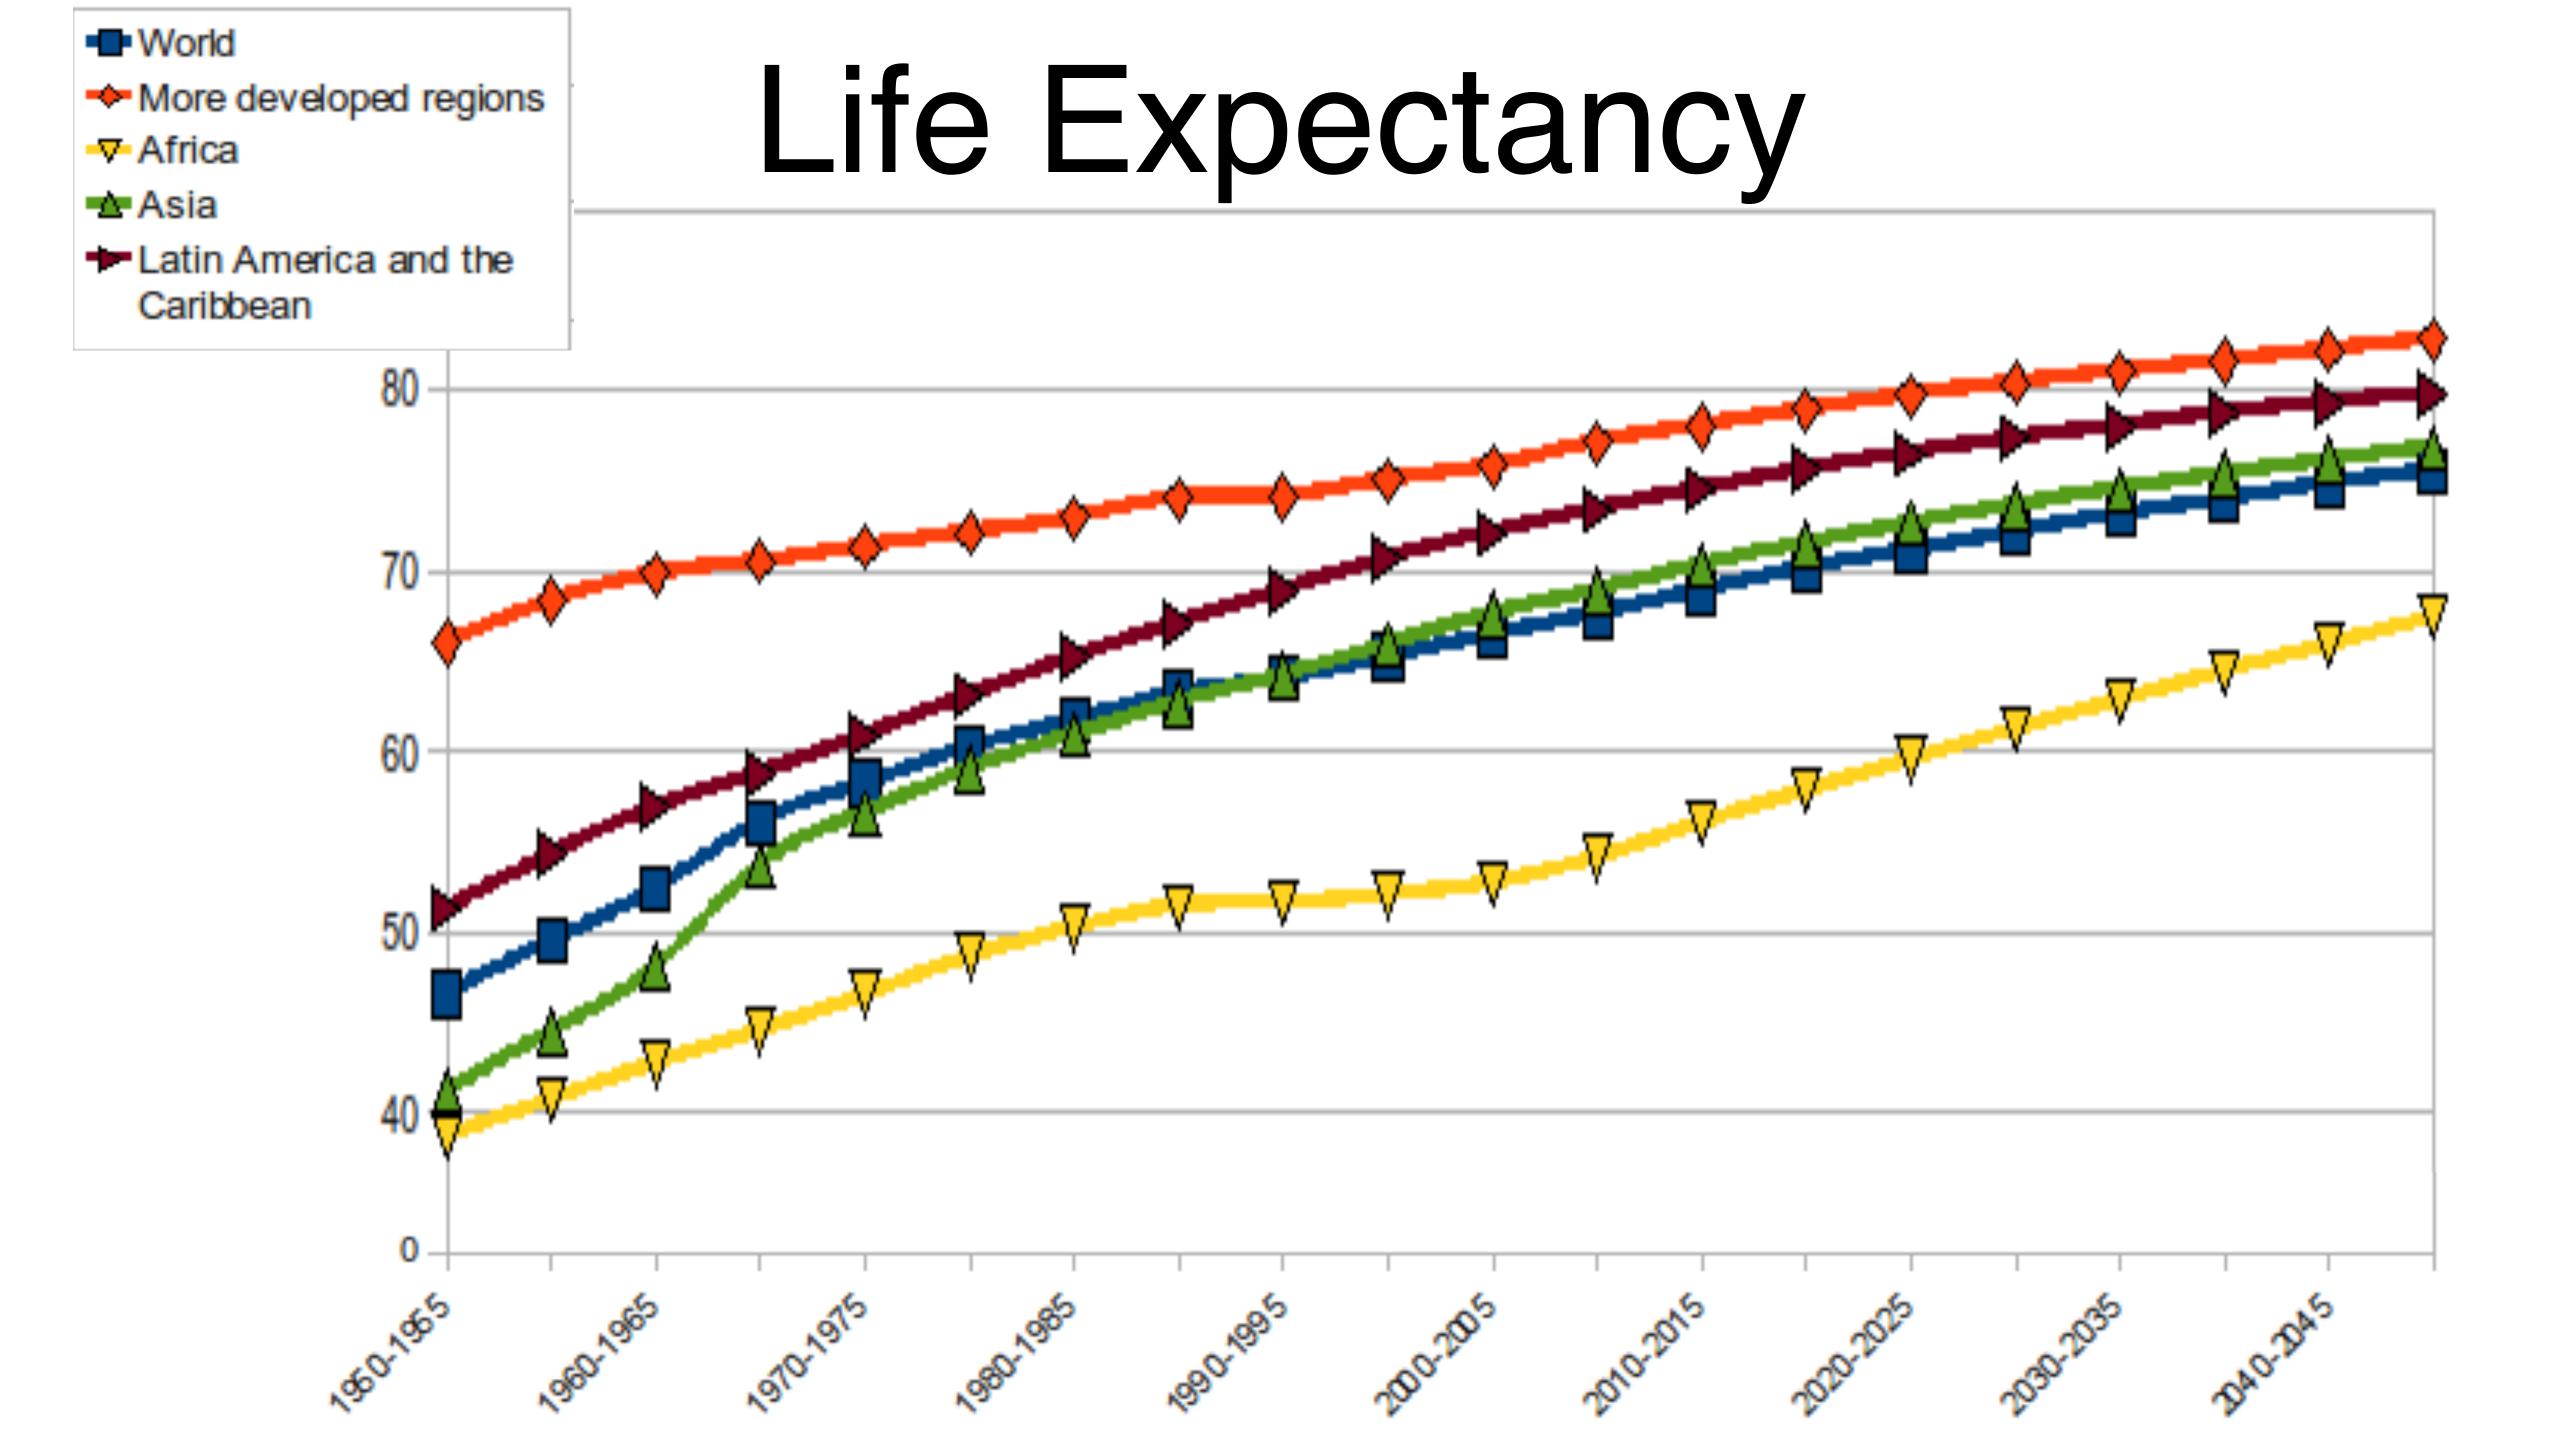

Undefined Expectation

$$p_i = \frac{3}{\pi^2} \cdot \frac{1}{i^2} \quad \text{for} \quad i \neq 0$$

$$E(X) = \infty - \infty$$

Undefined

Expectation

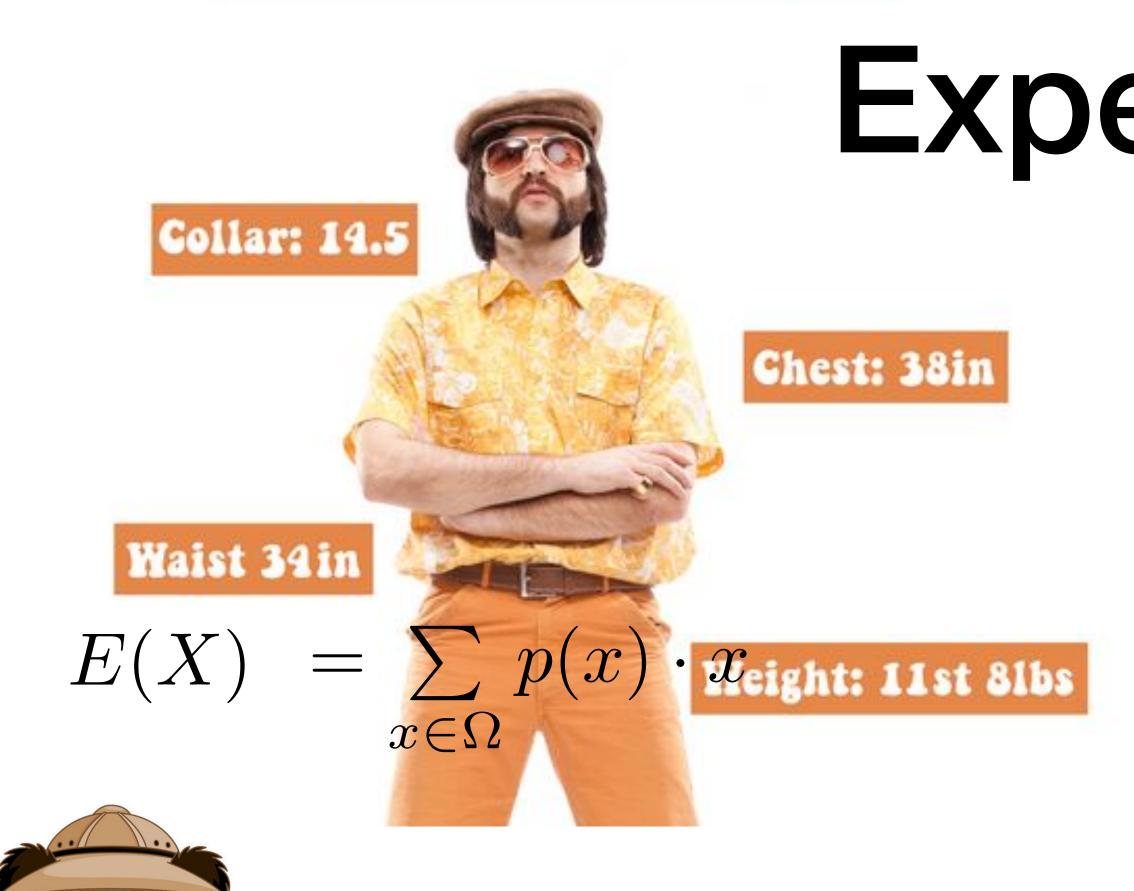

Average of many samples
